

What is I-Team Early Intervention?

We're an interdisciplinary team who provide consultation and training to local teams working with infants and toddlers with complex medical and developmental needs.

- Developmental Education
- Speech Language Pathology
- Physical Therapy
- Occupational Therapy
- Family Resources Consultation

What kind of support does the Early Intervention team provide?

We collaborate with local providers using email, in-person consultation, phone, and distance technology.

Following all technical assistance visits, we provide a summary outlining recommendations and discussion to the full team.

We provide modeling, coaching, brainstorming, and problem-solving.

We provide services around Vermont at no cost to local Early Intervention teams and families.

Vermont I-Team

Early Intervention Project

How does our early intervention process work?

We gather information about your child by facilitating a conversation, during which we learn about skills and needs within the context of daily routines and activities.

Seeking input from all team members, we gain a well-rounded understanding of your child and establish team priorities.

Once we all decide on priorities, our team and the local team together will develop:

1. Outcomes identifying objective measures for team support;
2. An action plan outlining the ways in which we'll provide support.

Based on these priorities, we provide research-based resources, conduct team-based trainings, and collaborate with local providers.
